FEMINIZED SEEDS CATALOG
2021/2022

OUR GENETICS

Hands Of Buddha is our main strain which we have been working on for more than seven years. The result is a vigorous and highly productive plant with a unique terpene and cannabinoid profile. From this strain we have isolated **5 phenotypes** that share the same cannabinoid profile (as can be seen on the descriptive sheets) but express different aromas and flavours. This is how **the feminized seed lines of the Buddha family were born (fem. 98%)**. Each has been tested with 99% germination rates and stable cannabinoid levels when grown under optimal conditions.

Mazzal Kush is a feminized cross with an American strain that has changed Hands Of Buddha's signature fruity flavour profile into a **typical Kush spicy flavour**. The taste reminds apple, cinnamon and incense. The germination rate is 99% and the seeds are 98% feminized.

Frozen Buddha is our first feminized CBG strain and it is a cross between Hands Of Buddha and a strain selected for its high CBG content. The result is a plant with a **CBD-CBG ratio that may vary from 1: 1 to 1:6 and very low THC levels**. The taste is spicy Kush with notes of black pepper. The germination rate is 99% and the seeds are 98% feminized.

Orange Buddha is a big and tall plant that can deliver a huge yield. Flowers are big and smelly, with sweet and sour notes of Orange.

Estimated Yield*

Pot 150-250g/plant**

Field 500-800g/plant

Flowering Time

8/9 weeks, harvest at end of september/first decade of october.

*Yield is indicative and is related to optimal growing conditions.

**The average is calculated on pots with Ø 35cm

The cannabinoid content may vary due to external factors such as pedo-climatic effects (ex. heat excess, idric stress, etc.) or parassites attacks (ex. Noctuoidea, Arthropods, etc.).
